

# Carbon Cycle 2.0 at Berkeley Lab: Team Science for Clean Energy

# Opportunity for buildings energy efficiency research

## Estimate of Economic Benefits

Lifetime Savings (Net) for Technologies\*

A 2000 National Academy of Sciences estimate of economic benefits of energy efficiency R&D assigns \$23 billion in savings to LBNL-derived *technologies*, and an additional \$48 billion in savings from energy efficiency *standards*

# FLEXLAB

## A new user facility for building efficiency!

series of configurable test-bed facilities to develop and evaluate low-energy, integrated building systems under realistic operating conditions

# Energy Storage Research Opportunity

**Goal: Batteries with five times the energy density at one-fifth the cost in five years**

## 2013 Technology

70 miles

\$150/mile of range

*battery densities improving  
at only 5% per year*

**5 times energy density**

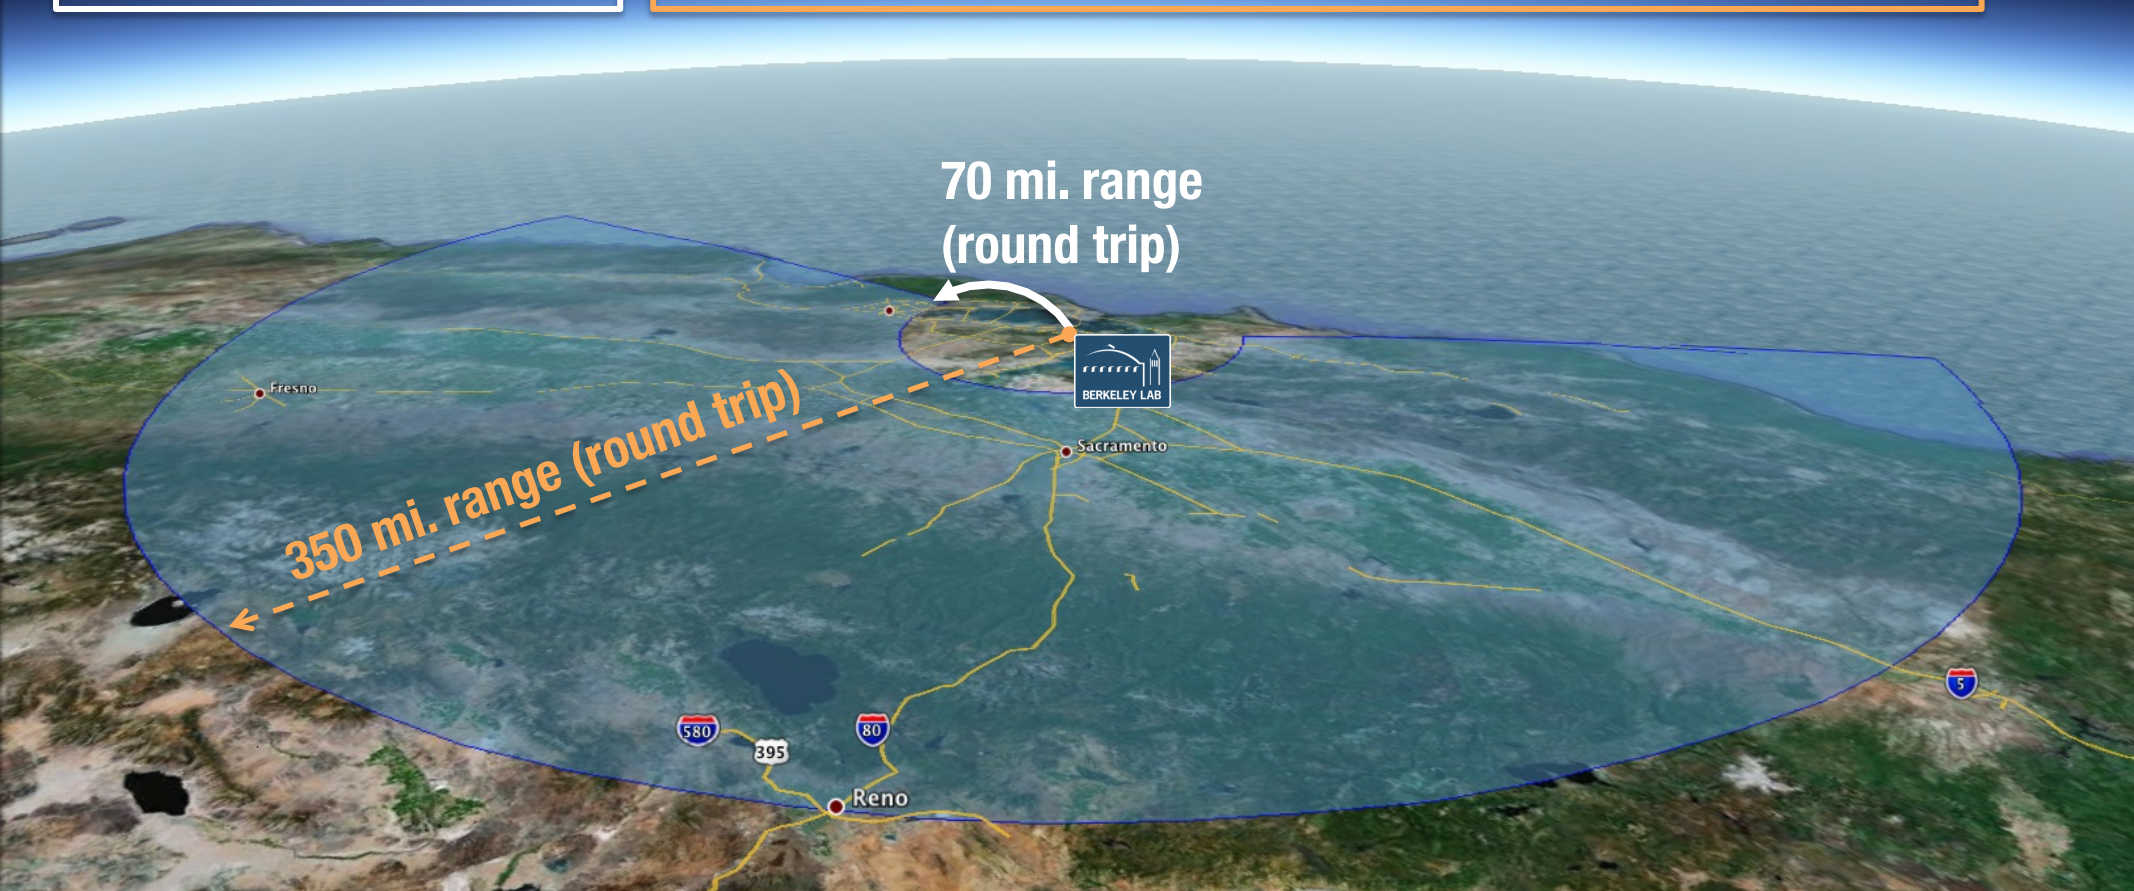

**1/5<sup>th</sup> battery cost**

Argonne National Lab and Berkeley Lab created this unique partnership with other labs, universities and companies

## 2018 Goals

350 miles

\$30/mile of range

# On May 25, 2012 Germany produced 22.4 GWp from Solar Energy

- 40% of electricity production from Solar at peak
- Total of 190 GWh production that day
- 14% of electricity produced over the 24 hr period
- **The Solar Energy Storage Problem**

# Joint Center for Artificial Photosynthesis

- JCAP Mission is to demonstrate an artificial photosynthetic system that generates fuel from carbon dioxide ( $\text{CO}_2$ ) and water ( $\text{H}_2\text{O}$ ) using the sun's energy
- Robust light absorbers and catalysts made of Earth abundant elements are developed and assembled into scalable prototypes for solar fuel generation

## Natural Photosynthesis

## Artificial Photosynthesis

inspires

Functional system using  
engineered materials

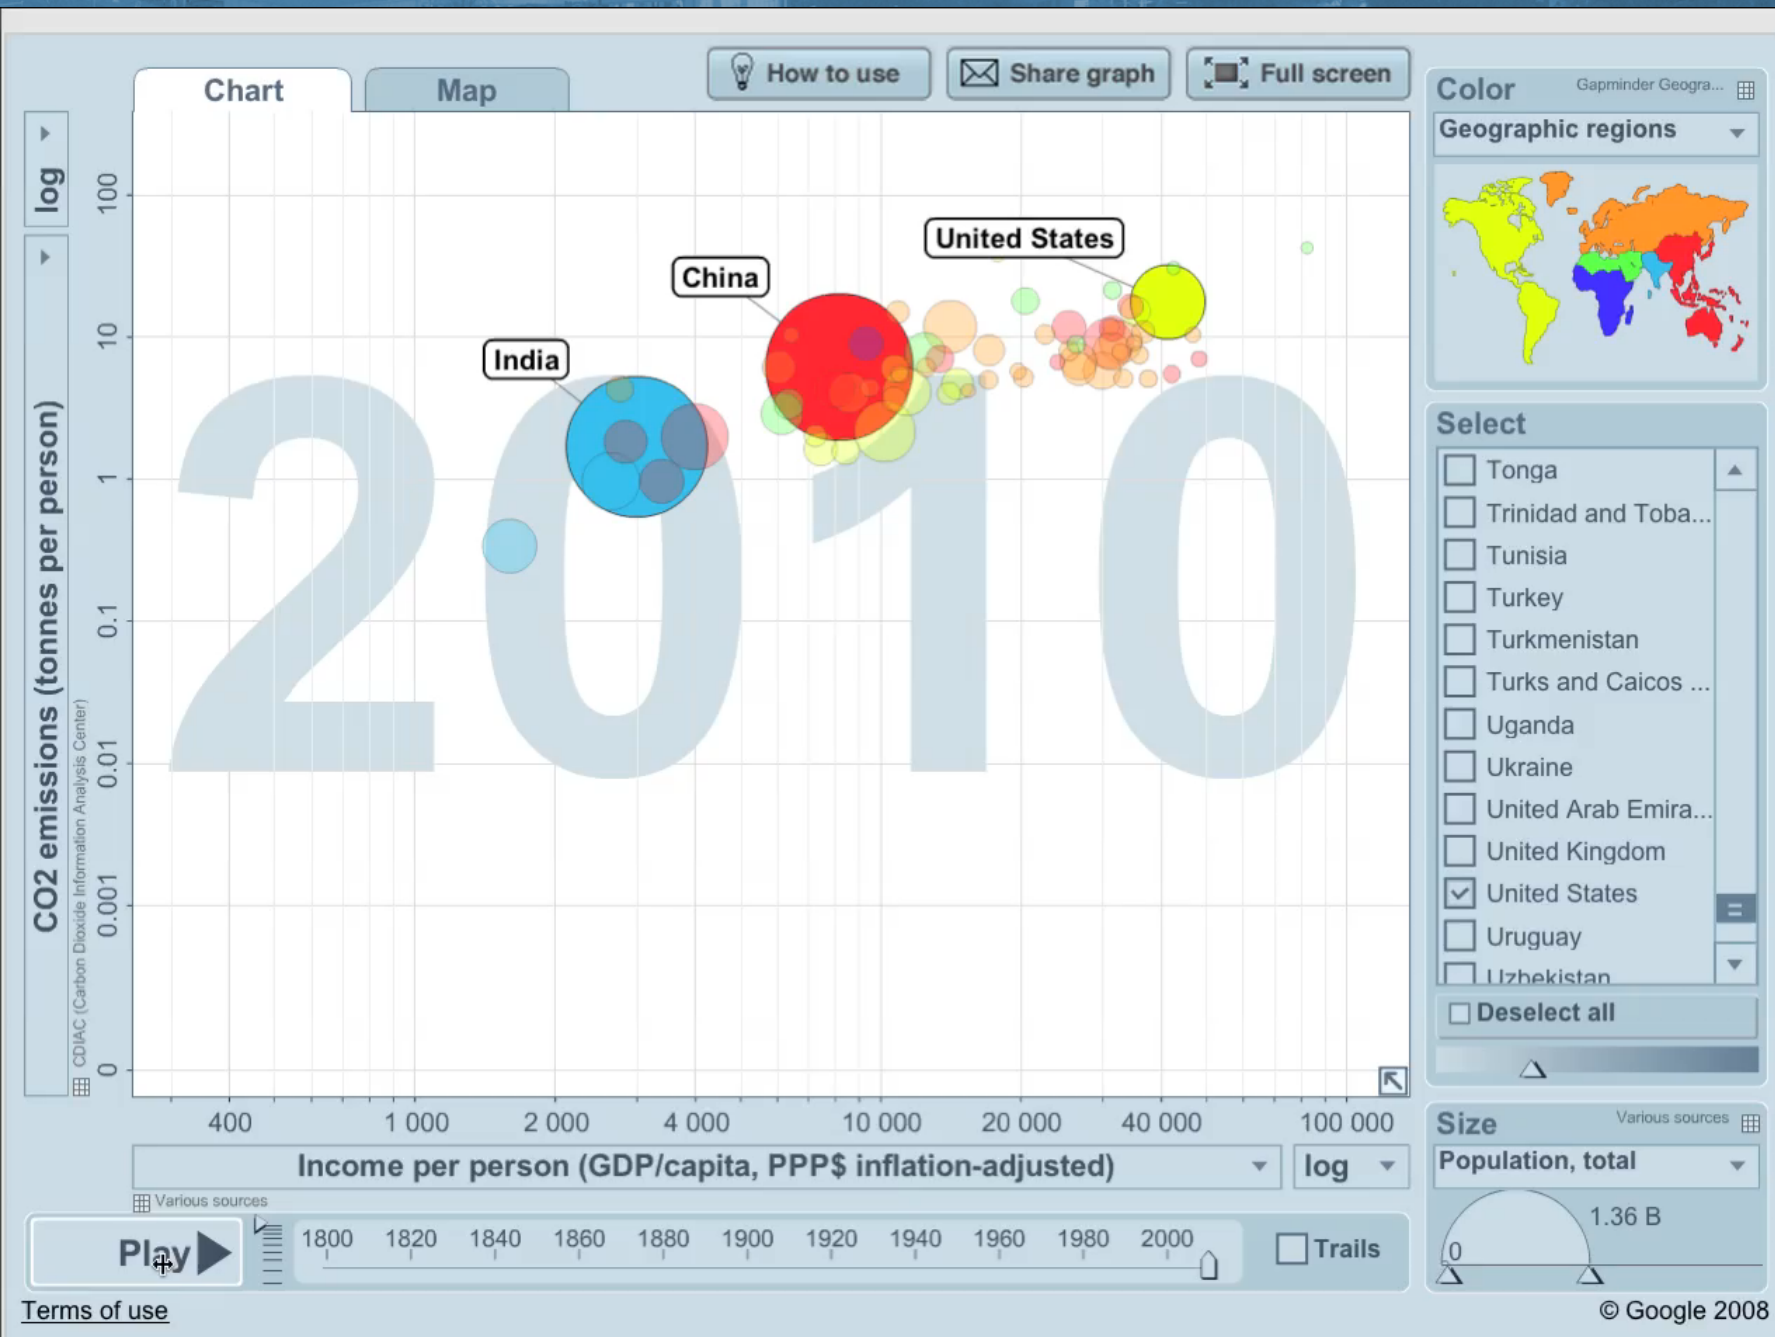

## Macroscale Prototypes

Goal is solar fuels tech for  
large scale deployment on  
non-arable land

# Opportunity to impact global carbon cycle through technologies for developing world

# Lab Institute for Globally Transformative Technologies builds on history of success

**Darfur Stove reducing CO<sub>2</sub> and saving lives**

**Safe drinking water for more than 1 million people daily**

**Biology to create lowest-cost malaria treatment available**

# Carbon Cycle 2.0 Major Programs
