

**CONSTRUCTION
AHEAD**

LBNL TRAFFIC SAFETY

Share the Road. LBNL roads are shared by bicycles, motorcycles, cars, trucks, shuttle buses, and delivery vehicles. California Vehicle Code requires all to adhere to posted speed limits, obey stop signs, and follow instructions from flaggers.

Slow for Construction. Multiple LBNL construction projects may cause temporary delays, detours and uneven road surfaces. **Slow down** through construction zones, and whether you are driving, cycling, or walking, practice these good habits:

- **Bicyclists.** Bicycles moving slowly should ride as close as practicable to the right (or the left, if there are surface hazards on the right). Vehicles should move to the other side to pass bicyclists. If there is not room for a bicycle and a vehicle to travel safely side by side, the cyclist should move to the center of the lane. Vehicles must stay behind the cyclist until it is safe to pass (CVC 21202).
- **Watch for Pedestrians.** Pedestrians in crosswalks have the right of way. Not all crosswalks are at a corner, or where there is a stop sign. After dark, drivers should use extra caution near crosswalks and shuttle bus stops.
- **Watch for Construction Changes.** Construction is characterized by frequently changing work operations. Roads may be open one day, and blocked the next. Follow the instructions of construction personnel directing traffic, and be alert to unanticipated situations. Drive slowly on trench plates.
- **Watch for Lab Visitors.** Vehicles or pedestrians traveling slowly may be looking for their destination building, or for a parking spot. Anticipate that they may make sudden stops or turns!
- **Watch for Blind Spots.** Delivery or other large trucks may also be unfamiliar with the Lab site, and these vehicles have large blind spots. Maintain a safe distance, whether you are on foot, on a bicycle, on a motorcycle, or in another vehicle.
